Interventional Pain Management Training (IPMT- December 2014)

Kamineni Hospitals, Kingkoti, Hyderabad

Dates: 6th & 7th December 2014

Venue: Kamineni Hospitals, Kingkoti, Hyderabad

Dear friends,

It gives us immense pleasure in inviting you to the event Interventional Pain Management Training - December 2014 (IPMT-December2014). We had an excellent response for our first programme IPMT - June 2014. We were overwhelmed by the response of participated delegates. Due to popular demand we are conducting the second session this year in December 2014.

We have realized that attempts at interventions by trainees who are not familiar with the techniques may result in uncomfortable and prolonged procedures for patients. For the same reason, we have procured simulator manikins, which are user friendly. These simulation manikins are excellent tools. These manikins consist of a specially coated plastic human skeleton, head covered in artificial skin and fabric covered torso, on which trainees can practice the placement of needles under X-ray image intensifier control. The X-ray density of the manikin is low so that the doses of radiation used during simulated procedures are reduced. The feel of tissues is as good as live human.

In this workshop, knowledge of surface anatomy is applied to each intervention. You will be taught orientation of image and identification of appropriate radiographic landmarks, identification point of needle insertion and angle of direction. You will learn the recognition of contact with deep bony structures & principles of withdrawing and directing needle to alter the angle. The end point of simulation is the correct radiographic appearance. The interventions will be taught on state of the art, simulation manikins in pain management. These simulations manikin for pain management are made available for the first time in South Asia.

This workshop is coupled with fluoroscopic and ultrasound imaging modalities. This course is designed for medical professionals with an interest in learning about interventional pain management.

Organising Chairman

Dr. Muralidhar Joshi
